

R23. Suitable in very low temperature refrigeration systems.

Introduction R23 is used in very low temperature refrigeration systems. The most common application is in cascade refrigeration systems in the range -40°C to -80°C. R23 can also be used to replace R13 in some equipment.

Specifics/facts Suitable replacement for R13, with comparable physical and thermodynamic properties. Non-flammable and non-toxic with a safety classification of A1. Compressors must be charged with polyolester oils, contact the compressor manufacturer for more information.

Product specification

Cylinder size in litres	Content in kg	Item number
12	8,5	121121

Advantages

- Suitable in ultra low temperature applications
- Solid experience and well adopted alternative
- GWP 14800 (AR4)
- A1-classification
